

StressTest

GlobalDetails

This test pushed the system beyond its limits to observe behavior during failure. While processing 111,763 requests, the rate peaked at 537.322 requests per second. We observed a clear collapse: 7% of requests failed (8,237 KO errors) and response times skyrocketed to 22,988ms (23 seconds) at the 95th percentile. This confirms the infrastructure's inability to manage this volume of concurrent connections.
