Load Test Performance Analysis

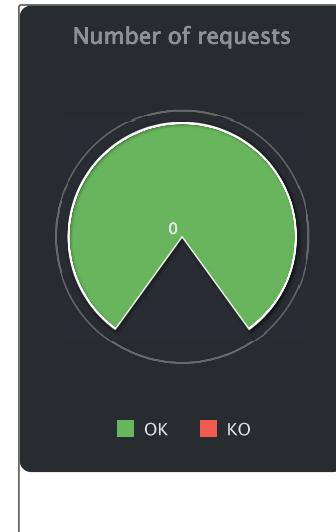

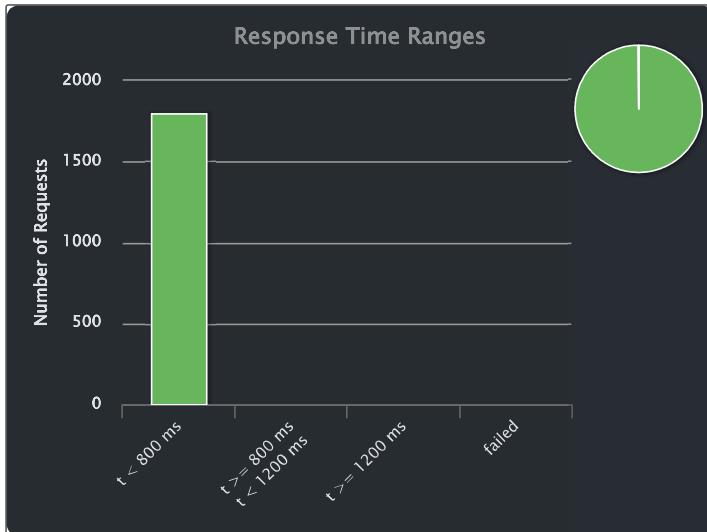

This Load test ran a steady workload for 3 minutes to validate that the application can handle normal expected traffic with consistent performance.

The run completed successfully with **0 failed requests** (1800/1800 OK) at an average throughput of **~9.945 requests/sec**, confirming stable availability under load.

Response times remained low and predictable ($p95 \approx 5 \text{ ms}$, $p99 \approx 7 \text{ ms}$, max $\approx 13 \text{ ms}$), indicating no meaningful queueing or resource contention.

The charts look smooth because the system stayed within its capacity: throughput was steady and latency stayed flat without spikes or error bursts.

This suggests the Tomcat/OS resources (threads, connection backlog, CPU) had sufficient headroom at this load level, so requests were processed normally without timeouts or refused connections.

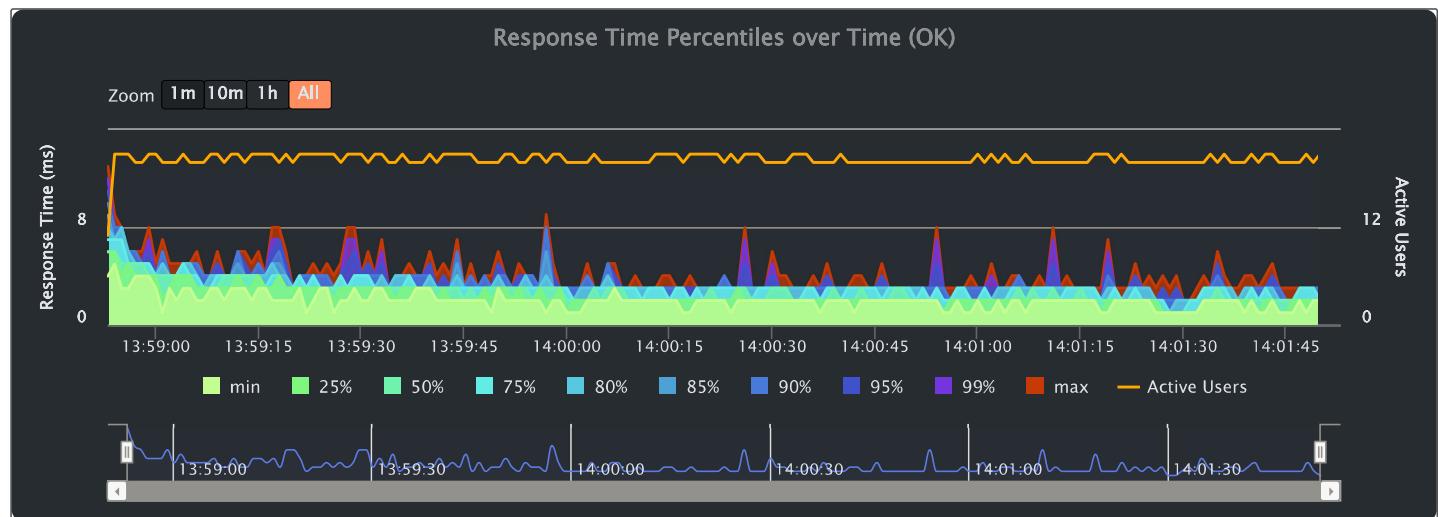

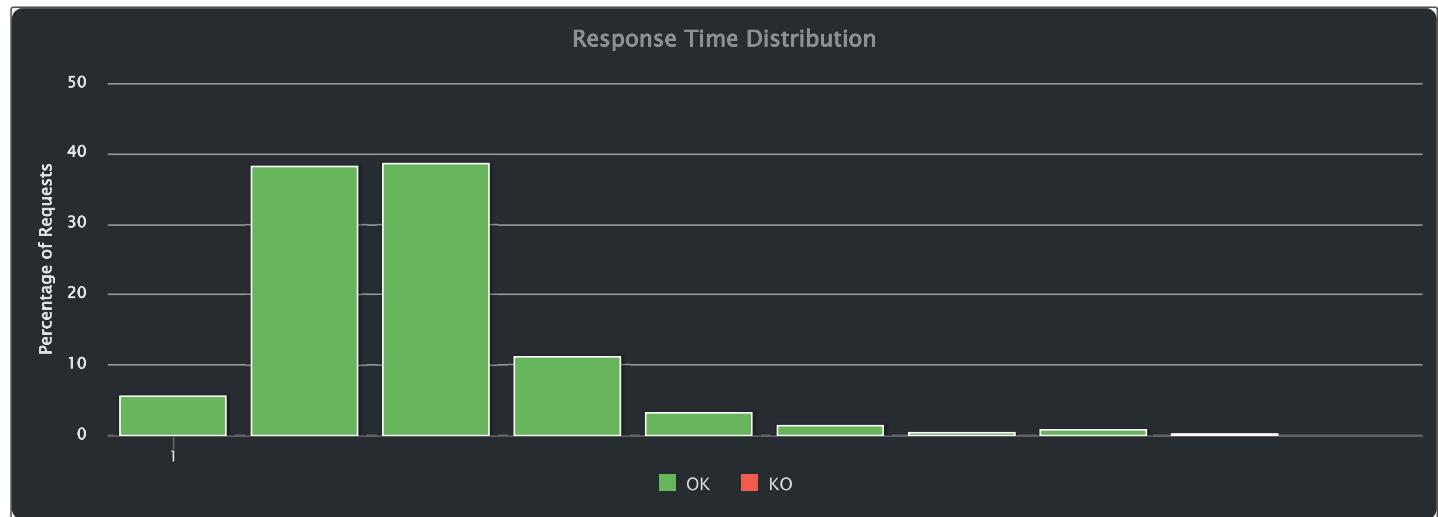

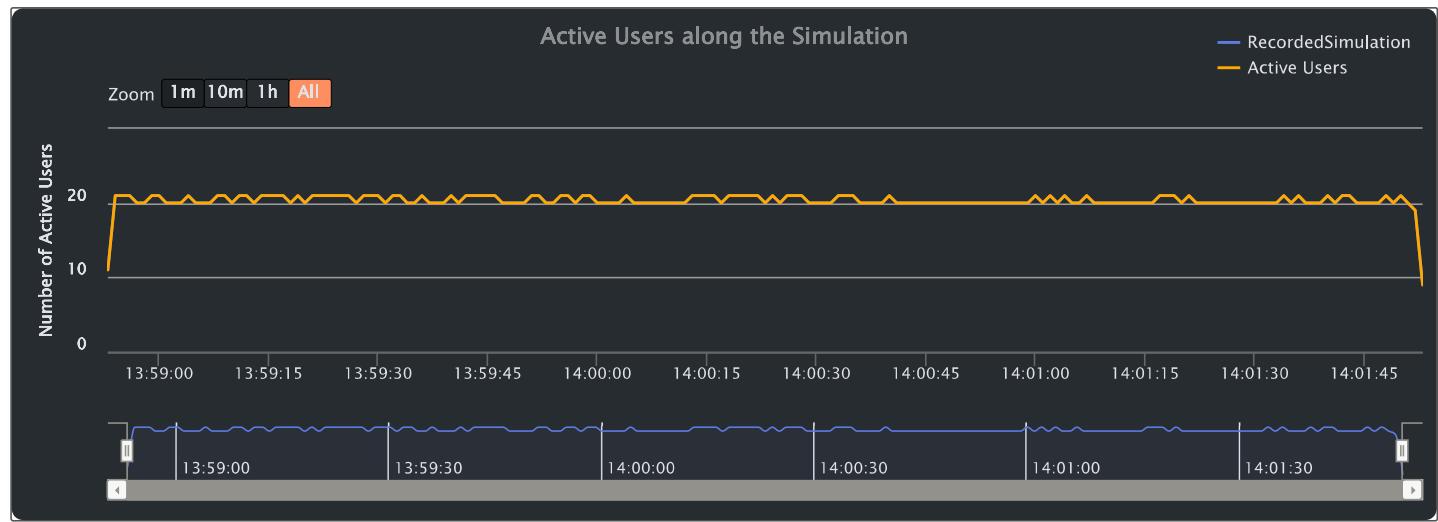

Gatling Version
Version: 3.10.4
Released: 2024-02-19

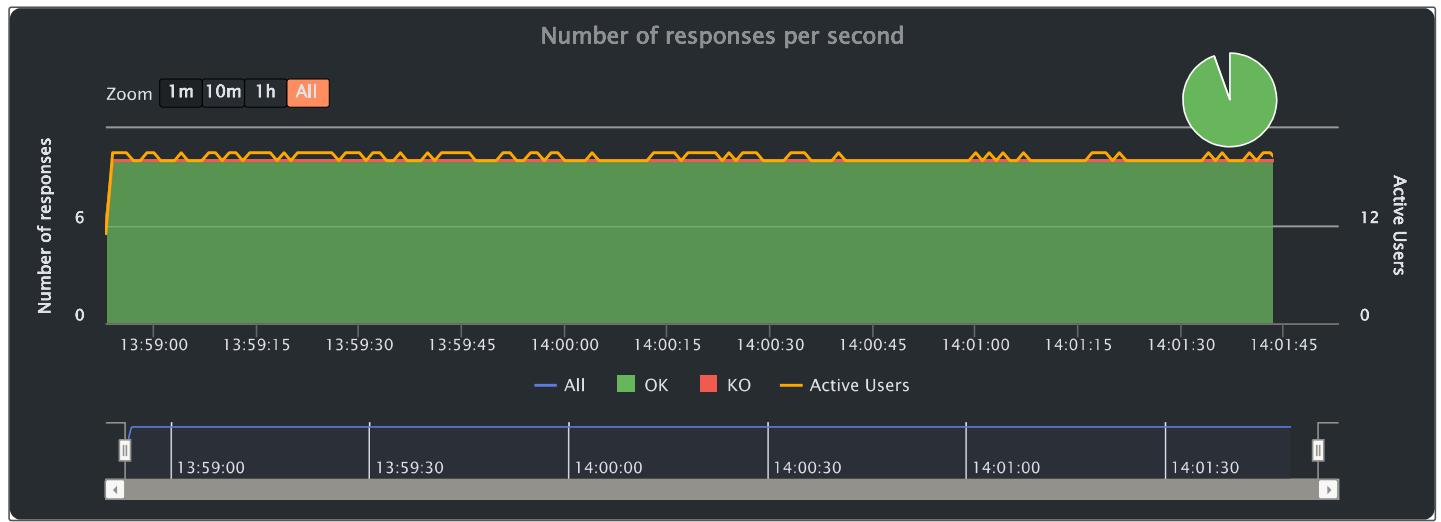

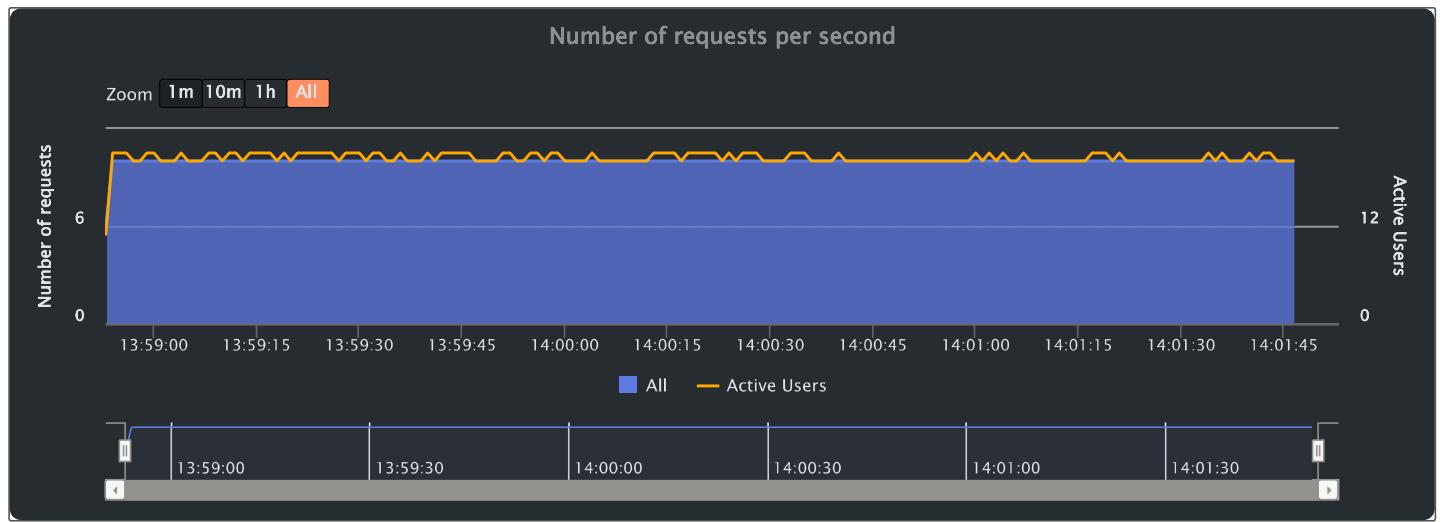

Run Information
Date: 2026-01-20 11:58:52 GMT
Duration: 3m 0s
Description:
Load test

| Assertions | |
|--|--------|
| Assertion | Status |
| Global: percentage of failed events is less than 1.0 | OK |
| Global: 95th percentile of response time is less than 2000.0 | OK |
